**05 Port San Luis Harbor Pier**

**Assignment 5: Long section**

The diagram above shows how the final sections for the show are to be laid out. The section will be cut the same way as before, with the land on the left. Pencil on vellum.

The drawing should show the existing conditions of the pier with any modifications to the existing conditions your group is proposing, and the additive elements of your intervention.

Groups 1, 2, and 3 will need to show a sloped ground line going from 0 at the left side of group 1 to -20’ at the right side of group 3. This should be done after those group’s drawings are completed.

Additionally, the silhouette of a scale figure must be added to these drawings. You may use your own, but a pdf of the figures to the right will be available on the website.

Also remember that for the final model, you are to add two 1/4”x1/4” pieces at each end that just out 1-1/2” from the pier to enable us to hang the final models.

---

**Notes**

- **Top of Deck** is aligned with the center of the paper.

- **Sheet height: 34”** This dimension cannot be changed and if your project is too tall to fit, run it off the top of the paper (yes, it will be cut off).

- **Sheet width 24:** This dimension may be adjusted to fit your group’s site. Leave 1” on each side for a margin.
